Vim® Injectable Amnion
Nature at its best
Deliver a natural scaffold

**VIM® INJECTABLE AMNION**

Vim Injectable Amnion is an allograft sheet intended for homologous use at the discretion of a physician where injection delivery may be beneficial.

It is an intact extracellular matrix (ECM) that serves as a natural scaffold. Proprietary processing preserves the biological components and structure of the ECM without disrupting tensile strength and elasticity.

The cryopreserved graft is supplied sterile and is intended for one-time use in a single patient.

Vim Injectable Amnion may be ordered in quantities of the user’s choice.
